

Monthly Laboratory Theme:

The Immune System

The **immune system** is the silent shield that **protects the body from threats** from the outside, such as bacteria, viruses and parasites, and from the inside too, like cancer. The immune system is made up of a combination of cells (white blood cells) and molecules which work together to **recognise and eliminate agents that are potentially hazardous for health**. Being extremely complex, the immune system sometimes runs into difficulty but all it takes are a few **simple blood tests to highlight any alterations**.

Make sure your Immune System is working properly with this Affidea Clinics Check-Up

With no letter from your doctor.

- **Blood Tests**
- **ESR**
- **PCR**
- **SPE**
- **Immunoglobulin IgA**
- **Immunoglobulin IgG**
- **Immunoglobulin IgM**

If the results are outside the acceptable range, contact your GP.
